Human Data Space

Human

Critical

Sensitive

Common

Public
data type: common data
access: passive consent

Reserve
data type: sensitive data
access: active consent

Intimate
data type: very sensitive data
access: active consent

Personal
data type: most critical data
access: should only be accessed by
the human itself

Personal Data Level

This model shows the different types and levels of personal data from humans. It will help you to gain perspective on the people whose data you want to use. The importance of different data for different people can vary greatly; model will help you to better assess this.

In order to deal with the subjective assessment of the sensitivity of data, **transparency, value and control** are important for every project with human data.
